

PULLER

interactive device for dogs

PULLER - UNIVERSAL ASSISTANT IN SOLVING YOUR DOG PROBLEMS

Most of the problems faced by the dog owners, are:

- excessive aggression;
- damaging furniture and other interior;
- disobedience;
- illness, including diseases of musculoskeletal system;
- obesity.

Most of those problems are caused mainly by one reason - lack of physical and psycho-emotional activity.

The uniqueness of the PULLER is that it is able to provide the necessary workout and at the same time a dog owner will not spend more time on training. Just 3 simple exercises for **20 minutes**, are equal to **5 km** intensive run or **2-hour** lesson with an instructor on the training ground.

You will be surprised at how quickly, with regular exercises, the problems associated with your dog will recede into the background. Moreover, these exercises will develop all muscle groups, the dog will quickly improve physical condition and look just fine!

We would like to draw attention to a specially developed material of the PULLER:

- it's **LIGHT**, that allows the owner to train a dog for a long time. Being so light makes PULLER easy and convenient to work with, even for children and women.
- it's **FLOATS**, which opens up additional opportunities in training and interacting with the dog.
- it is **ODORLESS**, which is very important when training dogs. PULLER does not leave an odor on the hands unlike most of the products for dogs, especially of the "Chinese" origin.
- it does **NOT INJURE** dogs teeth and gums, unlike most of the toys. When being bitten, PULLER gently lets dogs teeth deep inside the material, without losing its shape or properties for a long period of time. That's why PULLERs material is unique. All dogs really like this effect, they are simply getting "high" when biting PULLER. After trying it once, all dogs simply "fall in love" with it. By the way, this fact has helped to train many dogs to fetch, although there were no means to make the dog do it before.

PULLER necessarily consists of **TWO ITEMS** - this is the base meaning of this exercise equipment and the principal difference from all the rest of the products. This approach allows to increase the intensity of the workout greatly, allowing to give the dog the necessary amount of the workout in the short period of time.

PULLER will play an indispensable role in your dog's health. Too often dogs get seriously injured out of the blue. After the winter spent indoors, the first spring field trips usually end in dislocation or sprain of joints, especially this problem occurs to large dog breeds. But regular workout for just 15-20 minutes a day, will always keep the dog in good physical condition and the problems, mentioned above, will not occur.

BRIEF DESCRIPTION OF THE EXERCISES

RUNNING – during the workout two items of PULLER allow to get the dog running without lowering the pace, for the proper amount of time and at a longer distance (if any), and in urban surroundings, if the space is scarce, to maintain a high pace at short distances. In the absence of fetching skills to items make it easy to switch dog's attention to another object, and thereby to continue the exercise.

- the material of the PULLER is very light, that is convenient for the dogs, as well as for dogs' owners.
- due to its shape PULLER rolls fine, unlike a stick or ball, and the dog will have much more excitement while chasing an object.

JUMPING - basic sense of this exercise lies in two objects, because in this case it is not an object to fetch, but an exercise equipment. There is no sense in one object to this exercise just like there is no sense in one boxing glove. One object restricts training in the same way as one boxing glove limits boxing. Puller enhances dog's attentiveness and quick response to the trainer's actions. Using PULLER for young dog training will help to create base skills for further training program of any complexity, because switching from the fast action to the slower ones will not be a problem any more. Let your dog catch PULLER in the air, while jumping. Do not let go the first item and make your dog jump for the second one, by doing so you will teach your dog to intercept object.

Increase the height of the jumps and the intensity and frequency of the interceptions gradually.

- the material of the PULLER is completely safe for the animal's teeth, so the dog can enjoy the workout to the full extent without risk of an injury or teeth damage.
- when performing JUMPS PULLERS shape provides protection against possible injury and accidental bites (this often happens when you try to make the same exercise with a stick or ball), and this exercise is safe for the dog if it grips an object in the wrong way.

PULLING – offer your dog to pull on each of two items of PULLER switching them. This way any owner can teach his dog a proper grip, and the skills to put an object in the owner's hand. Also, when performing this exercise, muscle groups that have not received sufficient workout while running and jumping are actively working.

Material of the PULLER easily withstands such stress and conditions, sparing animal's jaws from damage by cushioning effect.
