IMPORTANCE OF DESICCANT CANISTER IN PHARMACEUTICAL INDUSTRY

SORBEAD INDIA

Extend Shelf Life & Efficacy of Products

WHAT IS DESICCANT CANISTER?

Desiccating canisters are rigid and small containers, normally filled with silica or clay gel, both of which are highly renowned for their ability to absorb moisture.

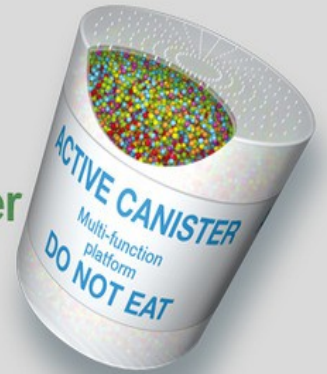

WHY DESICCANT CANISTER?

When medicine are affected by moisture, their shelf life decrease.

When medicine are affected by moisture, their shelf life decrease. Desiccant canisters are really helpful in preventing moisture to enter a packed product. These desiccant packets are used worldwide in the pharmaceutical industry for bottles, tablets and blister packaging.
